

Reloading load record

Free template — a personal record, and no load data

This document is a personal tracking tool. **It contains no reloading data and is not a source of any:** charges, charge ranges and overall lengths come exclusively from the tables published by the maker of the powder you are using, for the exact case / primer / bullet combination in hand. Never copy a load read from someone else's record, a forum or a video. A load written here is valid only for the firearm, the lot and the components it was recorded with.

Name

Firearm and serial no.

Press and measure

Scale, last calibration

Date	Calibre	Powder and lot no.	Charge	Primer	Case	Bullet and weight	OAL	Dist.	Group	Notes

Recording a load without its result teaches nothing: the “group” column is what makes this record useful. Write down the distance, or the measurement does not compare.
